Remote monitoring  
of anticoagulation

## Reduce adverse events by improving one number.

Research studies indicate that increasing Time in Therapeutic Range (TTR) by as little as 2.5% significantly reduces adverse events. Additional studies show that patient self testing can reduce adverse events by: 55% in thromboembolic events, 35% in major hemorrhagic bleeds, and 39% in mortality. Imagine if you could improve your patient TTR by 2.5%—or even more?

CoagMgr from WebCareHealth is a unique streamlined, web-based model for managing

at-home INR patients. It's designed so you can work with your patients to more easily monitor and adjust dosages in real time. After self-testing, patients submit their INR results through our website or mobile app. CoagMgr will send you a notification so you can take appropriate action.

This software solution has proven so effective, our customers have seen patient TTR *increase* by up to 39%! As a result, incidents of stroke and major bleeds dropped by up to 50%. All by improving one number.

### Four health networks. One result.

Study after study shows there's a strong link between improving TTR and reducing adverse events. So take a look at what happened when four major health networks adopted the CoagMgr solution. For every one of them, TTR went up significantly over time—as high as 84%.

## Continuous care that's more personal.

CoagMgr collects patient generated health data remotely. That data is available real-time for the provider to make treatment decisions. Leveraging this technology with your medical expertise can have profound impacts on your patients.

## Designed to make your office run smoother.

### Turnkey Efficiencies

From enrollment to billing, our secure web-based application boasts ease of use, patient tracking and compliance, and provider notifications that include delinquent and critical lab value monitoring.

### Provider Reimbursement

CoagMgr offers the only automated patient self-testing INR management reporting system that allows providers to submit for full reimbursement.

### Customer Service

Our nursing team is there at every step assisting patients and medical staff to ensure a successful program. When you succeed, we succeed.

### Patient Satisfaction

Our recent patient survey showed that 96% of our patients are satisfied with our remote monitoring program.

**WebCareHealth is run by providers and nurses, so we know what it's like to be in your shoes. We're driven to create technology that helps you deliver more personal and more effective care for your patients. After all, that's why we all got into healthcare in the first place.**

**Give your INR patients the gift of health. And freedom.**
