

Care for heart failure beyond the clinic doors.

Optimizing care for heart failure patients is everyone's goal. It is not a simple task, but with HFMgr you can give them a greater quality of life. You can start treating heart failure earlier in the disease process to keep your patients healthier, longer.

Our software solution enables you to collaborate with patients remotely by capturing real-time, patient-generated data to make actionable decisions. It allows you the opportunity to submit for reimbursement for the care your staff is providing. That's a rewarding combination.

Moving you closer to your quadruple aim with HFMgr.

Improving health of the patient population: When leveraged across your set of heart failure patients, you'll see people remain healthier longer, fewer emergency room visits and lower hospital readmissions by being able to deliver optimal, evidence-based care.

Improving patient experiences: By remotely submitting health-related data, patients will actively engage in their own care and feel a greater connection to you.

Reducing cost of healthcare: HFMgr promotes preventive care which we know reduces the cost of healthcare when executed systematically, giving your business financial health as well.

Increasing provider satisfaction: There's nothing better than knowing you helped a patient live a longer and healthier life.

Endorsed by world-renowned heart failure expert.

This isn't your average electronic data company. WebCareHealth is one of the only organizations working to offer an across the board provider and patient focused set of solutions. HFMgr makes routine monitoring of heart failure easier and most importantly more effective. I'm very excited to work with them.

— Dr. Marc A. Silver, Founding member of the HFSA

Continuous personalized care and optimization.

HFMgr is a unique software solution that collects critical patient information from various sources. It combines EHR information, data remotely submitted by patients and even therapy guidelines. Then it distills this information to effectively identify areas where care and treatment can be adjusted. HFMgr's technology paired with your medical expertise can have profound impacts on your patients. Whether done weekly or daily, this individualized real-time monitoring and care guidance can slow disease progression.

Americans will have heart failure by 2030.*

More patients needing more care.

An estimated one in five people will develop heart failure in their lifetime. Sadly, 60 percent of those diagnosed will die within just five years. And the numbers will continue to grow as the U.S. population ages. Heart failure, like many other chronic diseases in America, needs critical attention within our healthcare system.

Created to serve you.

WebCareHealth is run by providers and nurses who specialize in cardiology. We're driven to help medical professionals leverage technology to keep patients with chronic diseases as healthy as possible for as long as possible. So, we created a software solution to help you efficiently and profitably extend care past the clinic doors.

Stem the crisis for your heart failure population.
